To His Honour the Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Forty-Second Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario, during the year 1911.

Respectfully submitted,

W. J. HANNA,

Registrar-General of Ontario.

SIR:—

I have the honour to submit for your approval the Forty-Second Annual Report made in conformity with and under the provisions of The Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1911.

I have the honour to be, Sir,

Your obedient servant,

John W. McCullough

Deputy Registrar-General.

TO HON. W. J. HANNA,
Registrar-General of Ontario.

REPORT UPON

Births, Marriages and Deaths

FOR THE YEAR 1911

This the forty-second annual report of vital statistics of the Province of Ontario for the year ending December 31st, 1911, shows an increase of registrations of Births, Marriages and Deaths.

During the year the Department of the Registrar-General received 117,383 registrations, as follows:

Births	57,235
Marriages	25,807
Deaths	34,341
	117,383

This is an increase in the total registrations over those of 1910 of 3,937, divided as follows:

Births	1,364
Marriages	1,771
Deaths	802
	3,937

It speaks well for the health of the Province that the deaths show a considerably smaller increase than the births. It is to be hoped that the education along signs of sanitation and prevention of disease carried on by the Provincial Board of Health is being appreciated.

The County of York, including the City of Toronto, is the most thickly populated municipality in the Province, and always furnishes a good proportion of the entire number of registrations.

For the year we have

Births	11,743
Marriages	5,604
Deaths	6,993
	24,340

an increase of 2,486 registrations, being almost two-thirds of the total increase shown for the whole Province.

The following table gives the vital statistics for the past thirteen years:

——	Births.	Marriages.	Deaths.	Total.
1899	44,705	16,514	28,607	89,826
1900	46,127	17,107	29,494	92,728

POPULATION.

This being census year, we are naturally more interested than usual in the population of the Province, and the first question regarding it in the Department was, "How does the estimated population compare with the census?" An increase was expected and the Province shows an increase of 283,653 over the estimated population of 1910.

One might naturally expect that all the municipalities would be partakers in this increase. Not so, however. We have 47 county municipalities. Let us see how they compare.

Out of the 47 there are three which, becoming new districts in 1908, had no figures upon which we might base their populations. These are the districts of Kenora, Manitoulin and Sudbury, which were formerly parts of the districts of Rainy River, Algoma and Nipissing respectively. They now have increased populations, especially Sudbury, whose population for 1911 is much above that estimated for the whole district of Nipissing, of which it was formerly but a part.

Of the remainder, 27, or more than half, show decreases, and there are contained in these municipalities 6 cities and 11 towns. The balance, 17, show increases, and here the rest of the cities and towns are contained, with the exception of the Town of Kenora, which is not being considered, being in one of the new districts.

The decrease referred to is more apparent than real. In most cases the actual cause is that the estimating factor must have been too great, as the estimation was based on the census population of a decade ago, and thus the population had been brought up to a much greater number than was actual.

Of the city municipalities, all, with the exception of Ottawa, show increases.

In the towns of over 5,000 population, 8 show increases, 6 decreases, one has dropped below the limit of 5,000, and is not included in the list, while 7 new ones find a place in the five thousand column.

It is in the newer districts of the Province where the greatest increases have occurred; in the districts of Nipissing and Sudbury especially, where the wealth of the mines of the Northland has attracted thousands, not only from the older parts of Ontario, but from the entire world.

In the older portions of the Province, manufacturing centres show the greatest increases in population. There is but one municipality without a large manufacturing centre of any kind which shows a substantial growth in population, namely, Prescott and Russell, which is populated principally with French-Canadians, whose fecundity is well known.

BIRTHS.

The number of births during the year, as already stated, is 57,235. This includes the still-births, which number 2,463, and represents 29,607 males and 27,628 females. As usual, the preponderance is in favor of the males as 107 is to 100.

The ratio per 1,000 of the population is 22.6, being 2.3 less than that for 1910. This smaller ratio is accounted for by the correction of population by census. Had the increasing factor been maintained in an estimation the ratio would have represented 25.4, which is proof that the birth-rate has not actually fallen.

However, we may only consider the ratios as established by the populations supplied by the Report of Census of the Dominion Government for 1911. Thus, we find that the County of Haliburton shows the highest ratio, viz., 34.2, and this county contains the smallest population. Algoma shows the smallest, 10.8.

Heretofore, the highest ratios were shown in the districts of Thunder Bay and Nipissing, where the incorrect estimate of population made them abnormal. The correction of population brings them to normal.

The ratios of births in the city municipalities is 25.8 per 1,000. The same cause for the decrease, as expressed above, of 6.2, holds good here for there is an actual increase in population of 1,675, a greater one than is shown for the Province as a whole. This would argue that the rural populations are not increasing as quickly as those of the cities, which is a fact, the cause being pointed out on page 6 of the Report for 1910.

A comparison of the Births by Towns, which show an increase of 1,146, would not be fair at this time, owing to the number of towns in the list for 1911 having been augmented by seven, *i.e.*, eight new ones added and one old one dropped. Thus, a comparison of exact conditions is impossible.

There were registered during the year 1,262 multiple births, being 622 pairs of twins and 6 cases of triplets. The twins were represented by 632 boys and 612 girls, and the triplets by 7 boys and 11 girls. Algoma, Carleton and York each had a birth of two boys and a girl; in Hastings there were a boy and two girls, and in Ontario and Wellington three girls each.

There were 1,087 children born out of wedlock, 553 boys and 534 girls.

MARRIAGES.

There were 25,807 marriages registered during the year, being an increase of 1,771 over that of 1910, with a ratio of 10.2 marriages for every 1,000 of population. This is but 0.5 per 1,000 below that of last year, and if the estimating factor had been maintained to show increase of population, the ratio would have been 11.5, showing that Ontario maintains a good ratio in regard to matrimony.

The County of York, including the City of Toronto, shows, of course, the greatest number of marriages. The County of Essex, however, shows by far the highest ratio, 21.1, due, as has been pointed out in several previous Reports, to the number of couples who come across the river at Detroit to Windsor to have

the knot tied. No less than 2,774 marriages took place in that city alone, being an increase of 481 over 1910.

The following table is repeated for five years:

1907	1,562,	an increase	of 369	over	1906
1908	1,564,	" "	" 2	"	1907
1909	1,918,	" "	" 354	"	1908
1910	2,293,	" "	" 375	"	1909
1911	2,774,	" "	" 481	"	1910

The month of June, as usual, is the favorite month for marriage, there having been 3,439 marriages solemnized during the month. September and December follow, as usual, with 2,928 and 2,468 respectively. The order may be seen by referring to the Table, "Marriages by Months.—Counties."

The following tables show a recapitulation of Marriages by Denominations and also by Ages, as well as the percentage in each group.

The table showing the manner in which marriages occur by Denominations and Ages is used again this year, not only for the Province as a whole, but for each county, city and town of 5,000 population. This permits of comparison of mixed marriages, which is always interesting.

In 1910 there were 7,351 Roman Catholics married. Of this number 5,842 married in their own religion. The balance, 1,509, or 20.5 per cent., entered into mixed marriages. In 1911 a smaller number of Roman Catholics married, viz., 6,743, and of these 6,224 married Roman Catholics. This left 1,519 to contract

mixed marriages. Ten more only than in the previous year, but the percentage is greater, 22.5 per cent. showing that these marriages are increasing.

It may be a curious fact that there were only 266 men who did not claim allegiance to some denomination, as compared with 407 women who appeared to have belonged to no particular religious institution. Those claiming interest in some other denomination than tabulated numbered 1,737, and are fairly evenly divided.

As usual, the preponderance of couples married were between the ages of 20 and 24. Woman's reticence in regard to her age is proven by statistics. It is noted that 258 did not report age as compared with but 33 men.

DEATHS.

During 1911 there were registered 34,341 deaths from all causes; an increase of 802 over that of 1910. The ratio per 1,000 was 14.4, being 0.4 less than that of the previous year.

Thunder Bay district gives the highest ratio, and Rainy River district the lowest. The latter is due to Rainy River having been bisected to make the district of Kenora.

Of the county municipalities, 25 show increases and 22 show decreases.

The following table shows the diseases causing the ten highest rates of mortality. Still-births are not included.

Organic Heart Diseases	2,433,	being	7.63%	of total deaths.
Tuberculosis	2,353.	"	7.38%	"
Cancer	1,602,	"	5.02%	"
Pneumonia	1,568,	"	4.91%	"
Infantile Diarrhoea	1,367.	"	4.28%	"
Cerebral Hemorrhage	1,015,	"	3.18%	"
Diseases of the arteries	985,	"	3.08%	"
Bright's disease	814,	"	2.55%	"
Typhoid fever	637,	"	1.99%	"
Paralysis	538,	"	1.68%	"

The city municipalities contributed 12,940 deaths, with a ratio per 1,000 of 17.1, and the towns of over 5,000 population 2,704, with a ratio of 16.6 per 1,000.

Table 6 gives the number of deaths from all causes in each county and their ratio per 1,000 for a decade, and Tables 7, 8 and 9 show the deaths by classes of diseases.

TUBERCULOSIS.

It will be noted in the foregoing table that tuberculosis is second in the list of mortality. In the last 10 years the ratio per 100,000 has dropped from 148 to 93.

This terrible scourge still continues to lay a burden of sorrow and trouble on the shoulders of the people of this fair Province. In view of the fact that it has been proven a preventable disease, the regret may well be keen when it is remembered that one person out of every 1,000 of our population is doomed to die of tuberculosis. Legislation was this year passed making the disease notifiable, and regulations for its care and prevention have been established by the Provincial Board of Health.

The following table shows the number of deaths from this disease from 1881 to 1911, together with the four decennial

INFANT MORTALITY.

The deaths of children of tender years still continues high. Excluding still-births, 54,772 living children were born. Allowing this number to represent 100—

6,421 or 11.72% died under 1 year of age.
897 or 1.63% died at 1 year of age.
385 or 0.70% died at 2 years of age.
294 or 0.53% died at 3 years of age.
238 or 0.43% died at 4 years of age.

In all, 8,235 or 15.03 per cent. of total living children born during the year died before completing their fifth year.

Taking the total deaths under 5 years to represent 100—

6,421 or 77.97% died under 1 year.
897 or 10.90% died under 2 years.
385 or 4.67% died under 3 years.
294 or 3.57% died under 4 years.
238 or 2.89% died under 5 years.

Why do the babies die? As pointed out in this and other reports on Infant Mortality by specialists, it is due in a great degree to lack of knowledge on the part of the mother in regard to the care and feeding of her offspring.

The Provincial Board of Health has issued a small booklet on this important subject, which should be in the hands of every mother in the Province. It is free, and the Department would recommend that every physician who may not already be in possession of a copy procure one, and recommend it in turn to his patients needing such instruction.

DIPHTHERIA AND CROUP.

The deaths from this terrible disease, which attacks the young more particularly, has increased during the year alarmingly. Only by an immediate compliance with the rules and regulations laid down by the local Boards of Health can alleviation and a ready cure be hoped for. The table on page 15 shows the number of deaths from diphtheria and croup for the last ten years.

CANCER.

This is another burden of sorrow that the residents have to bear. It comes next after tuberculosis in point of mortality. It is unfortunate that the medical fraternity are, more or less, in a state of perplexity as to the cause of cancer. A real cure has not been discovered. The number of deaths increases each year, as will be seen by a perusal of the table on page 15.

BRIGHT'S DISEASE.

This disease continues to keep up a high average of deaths. The table shown on page 15 shows the number for the last ten years. This does not include deaths from Bright's in association with childbirth.

HEART DISEASE.

Including pericarditis, endocarditis and angina pectoris, organic heart diseases cause a higher death-rate in the Province than any other cause; over 7 per cent. of the total deaths is due to organic heart trouble. Heart failure, so-called and, unfortunately, too often so reported, is not included in this number. The Department continually endeavors to have physicians drop this description of cause of death. It is absolutely ill-defined, and when occurring in our records is relegated to No. 189, "Cause of death not specified or ill-defined."

See table on page 15 for number of deaths from heart troubles during the decade.

TYPHOID FEVER.

Continues to claim its quota of victims. Unfortunately, it is sometimes difficult to find the actual cause of epidemics from typhoid until such time as a large number of cases have developed and a certain number of deaths have taken place. The Provincial Board of Health is continually on the *qui vive* for epidemics, and is taking every precaution to prevent outbreaks from spreading. The greatest cause of typhoid in the Province is undoubtedly sewage-contaminated water. Several very extensive epidemics have been traced to this cause. The largely increased powers of the Provincial Board of Health provided for in the present year (1912) in respect to water supplies and sewage disposal, will no doubt serve to protect those waters designed for domestic use to a greater extent than formerly. Typhoid fever is so easy of prevention that its marked increase in recent years is a disgrace to communities where it has been epidemic.

The following table shows the number of deaths from this disease for the last ten years:—

It has been observed in the returns made by the Division Registrars throughout the Province that the certificate of the medical practitioner has been omiited in many cases. This is a grave fault,, and is due to negligence on his part. Attention is directed to this in order that it may be remedied. Without this certificate thecause of death is not stated, and is necessarily placed in group No. 189, "Cause of death not stated, or ill-defined." This is an obstacle to complete compilation of statistics, and it is hoped that in future better results will be seen.

SEARCHES AND CERTIFICATES.

During 1911 the Department made searches for 2,854 records of Births, Marriages and Deaths. Certificates were issued as follows:—Births, 676; Marriages, 188; Deaths, 355.

About 125,000 records were indexed.

To His Honour the Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Forty-Third Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario, during the year 1912.

Respectfully submitted,

W. J. HANNA,

Registrar-General of Ontario.

SIR:—

I have the honour to submit for your approval the Forty-Third Annual Report made in conformity with and under the provisions of The Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1912.

I have the honour to be, Sir,

Your obedient servant,

Deputy Registrar-General.

To HON. W. J. HANNA,
Registrar-General of Ontario.

REPORT UPON

Births, Marriages and Deaths

FOR THE YEAR 1912

The Forty-third Annual Report of vital statistics for the Province of Ontario for the year ending December 31st, 1912, shows an increase in the number of Births, Marriages and Deaths registered.

During the year, 119,865 registrations were received as follows:

Births	58,870
Marriages	28,845
Deaths	32,150
	119,865

This is an increase of 6,124 over 1911.

From the cities the number of registrations was as follows:

Births	22,929
Marriages	15,917
Deaths	12,526
	51,372

From towns of over 5,000 population.

Births	3,913
Marriages	2,018
Deaths	2,446
	8,377

Leaving, for the rural municipalities of the Province as follows:

Births	32,028
Marriages	10,910
Deaths	17,178
	60,116

NOTE.

In considering the number of births and deaths in the Province and all statistics relating thereto, it is to be borne in mind that still-births are excluded.

Heretofore, it has been customary in our annual reports to include still-births in all totals and calculations. A careful survey, however, of the various reports of vital statistics from such countries as the United Kingdom; the United States; the Australian colonies; New Zealand, etc., show that still-births are excluded from all statistics and it is thought that for uniformity with other countries, still-births should be excluded as a cause of death in Ontario.

For the sake of comparison with other years the following table showing the total Births and Deaths in Ontario, excluding still-births, for each of sixteen years, and the ratio per 1,000 of population is appended.

——	Births.	Ratio.	Deaths.	Ratio.
1897	46,868	20.7	26,508	11.7
1898	46,067	20.4	25,409	11.1
1899	44,286	19.4	27,747	12.4
1900	45,549	19.8	28,543	12.2
1901	45,281	21.1	28,500	13.0
1902	46,973	21.7	26,713	12.1
1903	47,709	22.1	28,399	12.9
1904	49,158	22.8	29,600	13.4
1905	50,808	23.5	29,748	13.4
1906	50,621	23.3	31,244	14.1
1907	52,289	24.1	31,756	14.3
1908	54,878	25.6	30,947	13.8
1909	53,448	24.3	30,792	13.7
1910	54,755	24.9	31,332	13.9
1911	56,096	22.6	31,878	12.6
1912	58,870	22.4	32,150	12.4

BIRTHS.

The number of births registered was 58,870, with a ratio of 22.4 per 1,000 of population, being an increase of 2,774 for the year in the number of births and a decrease of .2 in the rate per 1,000 of population. The cities contributed 38.9 per cent. of the whole number and the towns of 5,000 population, 6.6 per cent. The district of Thunder Bay gave the highest ratio per 1,000 of population, viz.: 33.0 and the District of Kenora gave the lowest, 13.7.

ILLEGITIMATE BIRTHS.

The total number was 1,256, as compared with 1,087 for 1911. This was at the rate of 21.3 for every 1,000 births. The Cities contributed over 72 per cent. of this illegitimacy.

The ratio of illegitimacy per 1,000 births is highest in the City of Ottawa where it amounts to a ratio of 86.1 per 1,000, while in Toronto with a population over four times greater, the ratio of illegitimacy is but one half that of Ottawa, while Kingston's ratio is 58.5 and London's 63.2. Hamilton is better off with 25.8.

In regard to the mothers of such infants, 324 were unfortunately not classified. It is interesting to note that 335 were domestics, 36 were living at home, 34 were factory hands, 20 were housekeepers, 16 widows, 19 operators, 14 waitresses, 12 stenographers, 12 salesladies, 15 classified as clerks, and the balance among various occupations.

MARRIAGES.

The number of marriages registered during the year was 28,845 being a ratio of 11.1 per 1,000 of population. There were 3,038 more marriages in 1912 than in the previous year, an increase of 0.9 in the rate per 1,000.

The number of marriages in the city municipalities was 15,917 or 55.4 per cent. of the whole, being a ratio of 18.2 per 1,000. The greatest number of these

took place in the City of Toronto. The City of Windsor came next with 3,429 marriages which was a ratio of 176.2 per 1,000. As this rate is so greatly in excess of the rate for any other municipality it is but fair to explain that 92.3 per cent. of these marriages were of parties from the United States. The number of marriages in this city was 655 in excess of that of the preceding year.

The following table shows the number of marriages in this city (Windsor) for the last five years:

1908	1,564,	an increase of 2 over 1907.
1909	1,918,	an increase of 354 over 1908.
1910	2,293,	an increase of 375 over 1909.
1911	2,774,	an increase of 481 over 1910.
1912	3,429,	an increase of 655 over 1911.

Two thousand, nine hundred and thirty-six, or 85.6 per cent. of the total number of marriages performed in Windsor in 1912 were performed by eight clergymen.*

Of all marriages, 26,826 or 93 per cent. were solemnized under authority of license. The remainder, 7 per cent., were authorized by the publication of banns.

The following tables show a recapitulation by Denominations and Ages:

*At the last session of the Legislature an amendment to The Marriage Act was passed, providing that one of the parties to the proposed marriage must have resided in the city, county or district where the marriage is to be solemnized, for 15 days immediately preceding the issue of the license, otherwise the intention to marry must be advertised in a local paper for three weekly issues. In certain cases the Registrar General may give a permit to issue the license.

For the manner in which the marriages took place in regard to denominations (mixed marriages) and as to the ages, see pages 70-158 of the Report.

Of marriages between Roman Catholics and other denominations, 820 men, married outside their own faith, while 1,096 women, so married.
Taken together 78.1 per cent. married in their own faith and 21.9 married otherwise, being 0.6 per cent. less than in 1911.

It is interesting to note the marriages by ages. The great marrying age is in the twenties for both sexes. 38.12 per cent. married between 20 and 24 and 26.52 per cent. between 25 and 29, or almost two-thirds of all marriages occur at these ages.

In noting the difference of ages in some couples, one man of 25-29 married a woman over 70, one 30-34 a woman over 65, one 45-49 a woman over 70. Five men over 50, one over 60, one over 70 married women 15-19. One woman 20-24, two 25-29, two 30-34 married men over 70. So much for the disparity in a few cases.

DEATHS.

The number of deaths registered for the year was 32,150 a ratio of 12.4 per 1,000 of population. This was an increase of 272 deaths, but in the ratio there was a small decrease.

The following table shows the diseases causing the ten highest rates of mortality:

Organic heart diseases	2,726	or	8.47%	of total deaths.
Tuberculosis, all classes	2,250	"	7.00%	"
Cancer, all classes	1,778	"	5.53%	"
Pneumonia	1,629	"	5.06%	"
Infantile diarrhoea	1,146	"	3.56%	"
Diseases of the arteries	1,142	"	3.55%	"
Cerebral hoemorrhage	1,029	"	3.20%	"
Bright's disease	848	"	2.63%	"
Paralysis	549	"	1.70%	"
Typhoid fever	483	"	1.50%	"

Comparing the above list with last year's list of ten causes it is interesting to note that the same diseases are the ones giving the greatest mortality in almost the same order. The first five occupy the same position as in last year's list, but in the above 6 and 7 have reversed places and 9 and 10.

The following diagram shows the principal causes of death in relation to total deaths:

The divisions represent the following:

Deaths under 1:	
Congenital debility and malformations	217
Diseases of early infancy	3,235
Diarrhœa	979
Other causes	2,063
Old age	3,646

Totals	14,285	4,710	7,564	21,748	5,887

Of the 32,150 deaths 12 were reported without stating the sex leaving a balance of 32,138 divided as follows: 17,434 males and 14,704 females or 118.5 males for every 100 females.

Cancer continues to take a high toll of life. There were 176 more deaths during the year than for 1911.

Bright's disease and diseases of the heart continue on the increase.

Typhoid fever it is good to note, has the lowest mortality that it has reached in nine years, due, no doubt, to the efforts of the local Boards of Health, in keeping a strict vigilance on the water supply of their respective municipalities, together with the care exercised by the people themselves in regard to sanitation. The greatest number of deaths in any one municipality from this cause took place in Carleton County were 101 or 20.9 per cent. of all deaths from typhoid occurred. Of this number, 98 are credited to the city of Ottawa which had an epidemic due to pollution of its water supply occurred.

There were 1,146 deaths during the year from Infantile Diarrhœa, a decrease of 221 below that of 1911. This falling off may be accounted for, in a measure at least, by the cool and wet summer.

Of this number 69.11 per cent. were in the cities, and towns of over 5,000 population: the balance in the rural municipalities.

The number of deaths due to external causes was 1,831. Of these 78 per cent. were males and 22 per cent. females. The number of males is always larger from this cause as it is our men who fight the battles of life and engage in hazardous occupations. The largest number (335) was from crushing accidents, railways, motor-cars, mining accidents, etc. Drowning came next with 276. The largest number from any one place was 22 in the County of York, 15 being in the City of Toronto.

TUBERCULOSIS.

Tuberculosis still continues to engage the close attention of medical men and those who are interested individually or collectively in combatting the advance of this disease.

The number of deaths for 1912 was 2,250, being a decrease of 103 below that of 1911. Just about 7 per cent. of the total number of deaths were due to tuberculosis; the ratio per 1,000 of population being .87, which was a decrease of .05, below that of the previous year.

Sixteen counties show increases of 88 deaths and 27 counties show decreases of 191 being a net decrease of 103.

By ages the heaviest death rate occurs in the twenties. Over 28 per cent. of all deaths from tuberculosis occurred between 20-29, while over 48 per cent. occurred between 20-39.

During the five years 1908-1912 of 11,785 deaths 49.74 per cent. were males and 51.26 per cent. females.

Of the different classes of tuberculosis that of the lungs claimed 10,115 victims. Of these 4,900 or 48.4 per cent. of the total were males; and 5,215 or 51.56 per cent. females.

From a perusal of the following table it will be seen that the disease in this Province does not discriminate to any great extent between the sexes. The greatest difference occurs in deaths from the abdominal form where, of the total number for 5 years (428) 46.5 per cent. were males and 53.5 per cent. females.

While the ratio per 100,000 of population is but 5 less than for 1911, the fact that it is a decrease is the important point. During the decade the average annual increase in population was 1.5 per cent. Very many of our immigrants are of that class of Europeans who love to cluster in small spaces and live in conditions impossible to the Anglo Saxon; conditions which are most favorable to the propogation of this disease and yet in spite of all which has to be contended with, the death rate is decreasing. This fact speaks loudly for the anti-tuberculosis campaigns being waged against this scourge by individuals and associations, and for the education instituted by Boards of Health throughout the Province in the interests of sanitation and health.

INFANT MORTALITY.

The number of deaths of infants under 5 years of age in the Province was 8,230. Of this number, 6,494 died before completing the twelfth month. This was at a ratio of 110.3 per 1,000 births.

Table 13 shows the causes of death of all children under five years. Of those under one year, the greatest number of deaths occurred as follows: Epidemic Diseases, 455; Convulsions, 329; Respiratory Diseases, 673; Diarrhœa, 979; Congenital weakness, 3,101. There were over 200 less deaths this year from diarrhœa than in 1911. This was no doubt due to the cooler weather which prevailed during the summer of this year. In fact the number is smaller than it has been since 1907, when it was 919. The ratio of deaths per 1,000 births from diarrhœa for the period 1907-1912 was as follows:

1907	17.5	1910	22.6
1908	22.2	1911	21.1
1909	22.1	1912	16.6

It will thus be seen that the ratio as well as the actual number is considerably decreased. The interest being taken in child welfare and in conveying instructions to expectant mothers is no doubt assisting to lower the death rate of infants.

During the year there were 2,646 searches for records of Births, Marriages and Deaths, while certificates were supplied as follows: 689 birth, 215 marriage, and 407 death, 1,311 certificates in all.

26,826 marriage licenses were received and 2,019 certificates. These were bound by the Department for reference.

Approximately 50,000 births, 25,000 marriages and 30,000 death records were indexed for the same purpose.
